Molecular Insights to Improve Diagnostic Accuracy

Caris GPSai™ is an AI-enabled Genomic Probability Score that uses whole exome (DNA) and whole transcriptome (RNA) sequencing, coupled with machine learning, to aid in identifying Tissue of Origin (TOO). Presenters will review cases of Cancer of Unknown Primary (CUP) and other cases where newly predicted TOO led to a reevaluation of treatment recommendation.

Gain insight into important issues in molecular oncology with real-world case studies.

CARIS
LIFE SCIENCES

Where Molecular Science Meets Artificial Intelligence.

Your Hosts

Theodore Nicolaides, MD
Senior Medical Director
Precision Oncology Alliance
